

Predictor Variables: Marriage Status, Education, Race

Potential Research Questions

How does education level influence marriage rates across different racial groups?

- This question explores how marriage status is affected by education, looking at whether trends differ among racial demographics.

What role does race play in the relationship between education level and marriage stability?

- This could examine if education impacts marriage stability differently depending on racial background.

*** Are there significant differences in marriage rates by education level within each racial group?**

- This question investigates intra-racial differences in marriage rates by education, identifying if higher education correlates with higher or lower marriage rates within racial groups.

How do race and education jointly impact the likelihood of remaining married, separated, or divorced?

- This could involve studying how marriage status outcomes (remaining married, divorced, or separated) vary when race and education are considered together.

Does education level mediate the effect of race on marriage status?

- Here, you could examine if education plays a role in mediating marriage patterns or outcomes among different racial groups, potentially identifying a causal pathway.
